## Municipal Hospital

### A Live Issue

It has been said that health and good humor are to the body like sunshine is to vegetation; then What Price Health? The establishment of a municipal hospital will do much to keep you in good health. The cost from the actual operating expenses of municipal hospitals in the province to day—is not more than 3 cents per acre, or \$1.80 per quarter section, per year; indeed it cannot be more than \$6.00 per quarter section per year, otherwise the government will not give the stamp of approval to the undertaking.

Service is the noblest and happiest function of man.

Could there be any greater service to your community than your support in the establishment of a municipal hospital where all members of the community, irrespective of financial standing, could receive the treatment they deserve. Do not misinterpret the foregoing paragraph; some may think they will be paying, while others will not; such is not the case. It is only through the combined effort of the community that such a hospital can be established, where a man of limited means can assume his small share of the burden, so when sickness overtakes him or one of his family, he can give them the hospital accommodation and treatment they would otherwise be deprived of, simply because each individual ratepayer and those adding service tickets have contributed their small share, which when placed in the common fund, has made possible the establishment and upkeep of your hospital.

What could be a more worthy undertaking than this? In establishing such a hospital you are also providing for emergency, an institution up to date in every detail, capable of taking care of what ever may arise. In other institutions the medical profession is working under a great handicap—more than is generally realized. The present day practice of medicine requires a highly trained nursing staff, technical and scientific apparatus and numerous other appliances and equipment that are part of a municipal hospital and are not in most cases available in private institutions.

In a municipal hospital the patient can receive more prompt and efficient care, not only because of the accessibility of well qualified and highly trained medical men, but also to the fact that all instruments required are available, not to mention the operating room and laboratory.

A municipal hospital is an essential need. Are you willing to do your share to assure the success of this community campaign?

Oratorical Contest To-Night  
6 pupils are taking part in the oratorical contest to-night in Oyen Theatre, to decide who will represent Oyen Inspector-ate division at Calgary on April 12, in the Canadian and International contest (Southern Alberta Division). They are: Franklin Van Horne, Oyen; Roberta Shuler, Sibbald; Geo. Shapka, Acadia Valley; Maynard Orpen, Buffalo; E. Bredin, Corral; and Murdoch McPherson, Chinook.

## FINISH SURVEY OF H. B. LINE TO FORT CHURCHILL

Winnipeg.—The Hudson's Bay Railway line has been surveyed as far as Fort Churchill and after four months' work in the North country, Major J. L. Charles, reconnaissance engineer of the Canadian National Railway; H. B. Wilkinson, locating engineer, and other members of the party of 24, have returned to Winnipeg.

"We reached the Bay on March 8," Major Charles said, "and left for home on the 19th." They travelled by dogs to the team road, 442 miles from the Bay, covering a distance of 80 miles in two days. After camping a day, they took horses to the end of mile 536, and came into Winnipeg by trail. "We have had a very mild winter," the engineer said, "and lost only six out of our 60 dogs."

A week ago Sunday the snow was melting at Churchill. The two Eskimos who arrived on St. Patrick's day with the mail, which had been delayed by a week of blizzards, were taken away, had some difficulty because the mail runners of their sleds thawed out. He explained the Eskimo custom of sneaking men on their runners and freeing them. "It is a very large practice, as long as the weather keeps cold. We had a few sleds taken away with us the day we left and our work was quite a novelty to them."

The Department of Railways and Canals had a big gang of men working on the harbor at Churchill, Major Charles mentioned, and the wireless station was in operation, manned by three men. They kept in constant touch with the aeroplane over Hudson Strait.

The contractors, Stewart and Cameron, were pushing the work of building the railway, he stated, and all was in readiness for the summer. Fire engines were out and ditching was going on north from Mile 305. Camps had been erected and the stores established. Supplies were all in readiness for the army of men which would come grading grass as soon as the weather allowed. Donald Grant, superintendent of construction for Stewart and Cameron, who has just returned from a trip which took him as far as Deer River, about 60 miles southwest of Churchill, says that by the end of May there would be at least 1,200 men on the job.

## Viscount Cave Dead

Recently Resigned Post of Lord Chancellor Owing To Ill Health

Burnham, Somerset, Eng.—Viscount George Cave, who resigned as Lord Chancellor after a distinguished career at the Bar, died March 26.

Viscount Cave, who was born in 1856, held various posts in the British government since 1915, becoming Lord Chancellor in 1922.

He was appointed solicitor-general in the first coalition cabinet in 1915, and later named by Premier Lloyd George for the home secretaryship. He was created a Viscount in 1926.

Previous to entering high government office he was a member of parliament.

## U.S. Wants Canadian Students

Because Educational System Is More Thorough Says English Editor

Hamilton, Ont.—People in little of Canada if they do not know that it is a land of cold winters, cold heads and warm hearts, are ready to ex-prophetize in the Times, London, Eng., told a large gathering here when he spoke at a Canadian club luncheon.

Referring to the exodus of Canadian students to the United States, Mr. Walter said the Canadian educational system is not so good as the United States institutions seek their services.

## H.B. Railway Construction

Work Will Commence In Earnest As Soon As Snow Goes

Winnipeg.—Work on the Hudson's Bay Railway will start in earnest as soon as the snow goes, according to Donald Grant, superintendent of construction for the Stewart Cameron Company, which has the contract for the remaining 154 miles yet to be built. Mr. Grant said there were from 200 to 300 men on the job at present and that in summer months a great many more would be sent out. By the end of May, Mr. Grant expects there will be at least 1,200 on the job.

## Apply For Railway Charters

3,583 Miles Of Railway In Canada Involved In Applications

Ottawa.—Hon. C. A. Dunning, Minister of Railways and Canals, invited the railway committee of the House of Commons that charter for 3,583 miles of railway in Canada were being applied for by companies other than the Canadian National and the Canadian Pacific Railways.

The cost of this mileage he estimated at \$175,000,000.

In addition, there were applications before the provincial legislatures which brought the total mileage up to approximately 4,000, with an estimated cost of \$242,000,000. This did not include equipment and when it was supplied the total cost would approximate \$300,000,000.

The minister told the committee it was not possible at present to lay down the principle that no more charters were to be granted to companies other than the Canadian National and the Canadian Pacific Railways.

On the other hand, the Government was of the opinion that with the exception of railways, which were required for the development of mining properties, something of that nature, the two great railway companies could take care of the work.

The committee of course, for consideration to the applications which came before it.

At the opening of the meeting P. S. Chubb, Liberal member for Port Huron, was again elected chairman of the railway committee, and Dr. A. M. Macphail, Liberal, Saskatoon, deputy chairman.

The first bill considered was that of H. A. Stewart, Conservative member for Brandon, designed to place the issue of licenses for the export of electric power under the control of the federal government rather than of the province in question. This bill was reported.

Two bills covering construction of railways in Western Canada were considered next. The first, sponsored by G. G. Coote, U.F.A. member for Macleod, dealt with the construction of the Highwood Western Railway Company. The second applied for an extension of time for the completion of the Calgary and Fernie Railway Company. It was introduced by W. F. Gershaw, Liberal, Medicine Hat.

## Taking Risk On Dirigible

Lloyd Will Expedite L-100 On Flight To London—A spokesman of the British government said today that the British dirigible passenger liner L-100 for its forthcoming flight across the Atlantic.

The rate, about 20 guineas per hour, is looked upon as moderate, in view of the risk involved in the enterprise. The rate in the ship's ability to make the flight successfully.

If the ship comes down at sea and is damaged, the underwriters will pay the cost of repairs, while if she is lost altogether they will pay to the limit of the insurance.

The dirigible, which is expected to make its first flight this spring, is equipped with six 700 horsepower engines, and has a speed of 50 miles an hour, and has a cruising range of more than 3,000 miles.

It is designed to accommodate 100 passengers and to carry 10 tons of mail.

## Officially Withdraws From Public Life

Lindeberg Weary Of Admiration Prefers Role Of Normal Citizen

Washington.—As acclaimed as one of the most popular of the new individual in the history of the nation, Colonel Charles A. Lindbergh has officially withdrawn himself from public focus to follow his long cherished pursuit of a normal life.

Wary of the admiring masses and the constant formal affairs in his honor, the young aviator contemplated the future and how best he might acquit himself in the interest of his lone hobby, "Lindy" doesn't know what he's going to do just yet.

## Was Prominent Selector

London.—Sir Charles Russell, eminent solicitor, died 65 years old today. He was selector for the Dominion of Canada and acted as solicitor for the British Government in the Bahr el Jebel arbitration between Great Britain and the U.S. in 1903.

## Red Cross Official Dead

Basle, Switzerland.—Dr. Bohly, president of the International League of Red Cross Societies, is dead here today. He was in charge of arrangements for exchange and transport in Switzerland of the wounded prisoners of all armies.

## Not Feasible For Canada

C.S. Bank System Impossible In Dominion Says Governor Harding

Ottawa.—A federal banking reserve system, organized on the same basis and along the same lines as the U.S. system, would be almost impossible in Canada.

This was the opinion expressed by Governor W. G. P. Harding, of the Federal Reserve Bank, Boston, before the banking and commerce committee of the House considering a possible improvement in Canada's banking system.

The Federal reserve bank of the United States was in no sense a bank, Governor Harding told the committee. "It cannot loan anything five cents or less." "It exercises a general supervision of the twelve Federal Reserve Banks in operation. It can be the character of the security which may be accepted but it does not compel a bank to make a loan."

## Experiment With Fertilizer

Alberta, Saskatchewan, and Manitoba Ship Vessels Of Superphosphates From Trail Smelter

Winnipeg.—The Dominion government in experiments that are being made with the use of superphosphates from the Trail Smelter in British Columbia, a fertilizer, J. H. Evans, deputy minister of agriculture, stated recently when commenting on reports that a large quantity of by-product had been shipped to points on the prairies.

The results of the experiments are being made with great interest in Saskatchewan and Alberta have also got their share of the shipments, the idea being to make tests of the fertilizer and to see what range of territory as possible, Mr. Evans said.

## ONTARIO BOARD WILL HANDLE ALBERTA COAL

Toronto.—The office of fuel controller, established during the war, has assumed a new importance in the eyes of the Dominion government's action in requiring the railways to transport Alberta coal to Ontario, British Columbia and the Yukon.

A board was being set up by the legislature in connection with the voting of an item for the fuel controller's office. A board was being set up by the legislature in connection with the voting of an item for the fuel controller's office.

It would be the duty of the board to see that the proper type of coal was brought east. Mr. Ferguson said. He suggested that in his opinion the railways should not be allowed to transport any coal not approved by the board.

Asked how the coal was to be distributed, the premier said he hoped that the board would be organized. I would like to see the Alberta government establish an office here to look after the coal, as a distributing center and an information bureau. Persons wishing to say the coal could arrange for it through such an office. As was not the intention of the government to take charge of distribution, he said, it had been done with the trial shipments.

Ottawa.—"Those engaged in coal operations in British Columbia have not made representations as to getting into the eastern market," was the answer given by the Government to a question asked by A. W. Neil (Independent, Comox-Alberta), as to whether or not the Government would extend the test movement rate on Alouette coal to coal from British Columbia with a pro rata increase for the extra distance.

Wary of the admiring masses and the constant formal affairs in his honor, the young aviator contemplated the future and how best he might acquit himself in the interest of his lone hobby, "Lindy" doesn't know what he's going to do just yet.

Winnipeg.—Work on the Hudson's Bay Railway will start in earnest as soon as the snow goes, according to Donald Grant, superintendent of construction for the Stewart Cameron Company, which has the contract for the remaining 154 miles yet to be built. Mr. Grant said there were from 200 to 300 men on the job at present and that in summer months a great many more would be sent out. By the end of May, Mr. Grant expects there will be at least 1,200 on the job.

## Discuss Activities Of Communists In Canada

Country Being Flooded With Red Literature Senate Is Told

Ottawa.—The Senate recently discussed the dangers of Communist propaganda in Canada and heard an address delivered at length by Senator C. P. Bennett, who explained what measures were being taken by the Government to repress the evil. Various religious bodies had petitioned the Government to close Communist schools; the Ukrainians in Canada fell easy prey to the Red agents.

There were 40 such schools in the country, attended by 2,000 children, said Senator Beaudin, while Labor Temples were also used for Communist meetings. Immigrants were taken there to listen to these doctrines. The country was being flooded with Communist literature.

Senator Grashack declared that the Communist was the enemy of the Socialist and the Labor man. He asserted the Senate that the Royal Canadian Mounted Police knew of these activities and kept the Government informed.

Senator Dandurand affirmed that the Government was watching the Communist movement closely. Senator McKeown declared that the Government for two sessions had sought to amend the law to prevent the deportation of anyone. It was the Government's duty to deport the enemies of the constitution.

Senator Dandurand affirmed that the Government was watching the Communist movement closely. Senator McKeown declared that the Government for two sessions had sought to amend the law to prevent the deportation of anyone. It was the Government's duty to deport the enemies of the constitution.

## BILL PROVIDES FOR NEW GRADES OF SPRING WHEAT

Ottawa.—Amendments to the Canadian Grain Act, providing for grades for the large number of new wheat varieties grown in the prairie provinces will be made by Parliament this session. Announcement of this is contained in notice of a Bill which appears on the order paper.

The bill is being introduced by Hon. James Macdonald, Minister of Trade and Commerce, and in addition to providing for a number of entirely new grades for new varieties of wheat, it is providing for some new grades for oats and revamping of the grades for barley.

It is expected that the bill will provide new grades for certain of the new wheat varieties developed within the past few years.

It is expected that the bill will provide new grades for certain of the new wheat varieties developed within the past few years.

## To Save Canada's Forest Areas

Canadian Forest Week Set Aside

By Proclamation

The Governor-General has by proclamation set aside the week of April 24 to 28 as "Canadian Forest Week." Those in authority realize that it will be but a few short weeks until the menace of forest fire will be with us again and there will be the ever present danger of carelessness with camp fire, cigarette, pipe, etc. No doubt a few forest fires are caused by lightning but the fact remains that the great majority of forest fires are man-made—the result of carelessness. Organization work is now going on to stir all citizens of the Dominion to a sustained and patriotic effort to conserve our great forest heritage.

If everyone could but visualize Canada's forest industry in all its ramifications and realize that the safe-keeping of the forests is a responsibility as well as a national necessity, there would surely be no more man-made forest fires. The welfare of every individual in the Dominion is affected by Canada's forest lands—they dig deep into everyone's pocket book. Take the lumber trade in a particular instance, as a source of employment for instance, says the Department of the Interior, through its Natural Resources Branch, "The lumber trade is the present moment deep in the forests an army of probably 50,000 men is engaged in felling and processing Canada's timber supply for the coming year, involving loads of saw logs and pulp wood are being moved readily along the roads, the rivers and over the lakes, the picturesque river driver will soon be in his element again because the timber moving down the big-choked creeks and rivers. That is one phase of forest industry, the foundation of all the wood-manufacturing enterprises which follow.

There are now over 6,500 manufacturing establishments in Canada in which wood or paper are the principal raw materials used. These plants employ 125,000 people and distribute annually about \$150,000,000 in wages. In the construction industry, the wood plays such an important part there were employed at the height of activity last year upwards of 150,000 workers. In transportation, it is probably nearly a quarter of a million persons are employed, products of the forest constitute one of the largest and most consistent sources of revenue, amounting for twenty per cent. of the tonnage hauled on steam railways.

One might go on almost endlessly to show how intimately everyone's personal welfare is bound up with healthy producing forests. The mines, the fisheries, even agriculture depend for much necessary equipment and supplies on the forests. Mechanics, farmers and trades-people by the thousands are required to keep workers in forest industries supplied with equipment and the necessities of life.

### Required Explanation

Lawyer (to distressed witness): Now, sir, did you see your wife in the date in question or at any other time, say to the defendant or anyone else that the statement imputed to you and denied by the plaintiff was a matter of no moment or otherwise? Answer me yes or no.

Bewildered Witness: Yes or no what?

### No Question About It

Auto Tourist: "I clearly had the right of way when this man ran into me, and yet you say I was to blame."

Local Cop: "You certainly won't, Anstalt."

Anstalt: "Why?"

Local Cop: "Because his father is mayor, his brother is chief of police, and I'm engaged to his sister."

### Reindeer and Trails in Jasper Park

There are now 115 miles of roads in Jasper National Park, Alberta, of which 58 miles are surfaced with automobile traffic. Added to these are some 630 miles of well defined trails leading to various points of interest.

"Why do you applaud when she sings so wretchedly?"

"So long as I am applauding she isn't singing again!"—Lustige Blätter, Berlin.

W. N. U. 1727

## Discover Earliest Printing

Work Done in 1478 Found Among Old Documents in London

A small piece of parchment, eaten away by mice all down one side and in seven other places, has been retrieved from a bundle of old documents at the Royal Office, London, and placed in a position of honor as the earliest example of printing in England.

It has been recognized as an indulgence printed by Caxton in the Almonry at Westminster Abbey in 1478 for the Abbot of Abington, and issued by the abbot for the ransom of sins.

There had been a justice in Rome in 1478, and Christians gained special privileges by making a pilgrimage that year.

John, the Abbot, obtained authority to pass on these privileges, by means of an indulgence, to people who had not made the actual pilgrimage.

He gave Caxton the order to print copies of the indulgence, and the names of those to whom it was given were added by hand. The text consists of 260 words and is of marked historical interest.

The document, now recognized as the first printed indulgence in England, was granted by Henry Laney and Katherine his wife, residents of London, in return for a ransom of 200 marks for a Christian debt to fight the Turks.

The document has been placed for public view in the room of the Record Office, which also includes the Domesday Book, and the famous "Scrap of Paper" guaranteeing Belgian neutrality.

## Teak Long Rest

Teak Embedded in Stone For 20 Years Regains Elasticity

A teak that lived embedded in stone for 20 years has been found at Dunstable, Mass.

The teak was discovered by workmen employed in tearing down a section of a hotel while making alterations.

Mr. Teak was found sitting, as he had said for the past 20 years, since he had been used to build a 1907. Duly and somewhat shrunken, the teak was at first thought to be dead, but when touched it moved with a healthy hop. Some weeks ago another house was demolished in Texas. That animal, too, was reported to have lived for years in a stone sealed chamber.

## How To Attain Old Age

Live As Quietly As Possible Says London Biologist

That lay men live longest is the discovery of Prof. Paul, famous London biologist.

The holy men of India, for example, who live in complete quietude and no physical exercise, attain incredible old age. A man who goes to bed—sleeps three—might live to rival Methuselah!

Prof. Paul bases his conclusions on his discovery that a few flies enclosed in a bottle proved very long-lived and died early deaths. When the bottle was packed and the flies had not space to buzz about they very nearly grew beards!

It was the same with plant seeds. Prof. Paul discovered that the seeds that grew fastest live for the shortest time.

## Rock Coloring At Waterton Lakes

Mountain Peaks Look Like a Futurist Painting

One of the main characteristics of Waterton Lakes National Park in southern Alberta is the beautiful coloring of the rocks. Bands and splashes of tawny gold, greens, wine colors darkening to purple, make some of the mountain peaks look like a futurist painting, and give to the whole region a warm and colorful appearance. In the northwestern part of the park is the curious Anderson peak, with its sharp pyramid formed of yellow shales, which at sunrise and sunset glazes like pure gold. So that the mountain is facetiously known as the Millionaire's peak.

The girl, lonely and uncomfortable as a fish out of water, was leaning against the wall, framed against the dark sky, when the hostess took pity on her.

"My dear," she said, kindly, "you look just like an old Rembrandt."

"Well," retorted the doctress, sharply, "you don't look too darned snappy yourself."

Eve: "I think a man should give his wife plenty of rope."

Ernest: "Yes! I did mine and she skipped."

The man or woman who is not curious is a curiosity.

## KNOWLEDGE AND PUBLIC HEALTH

Contrast Between Disease Conditions As Recorded By Dickens and Present Day Conditions

Hon. Mr. Justice Riddell in a recent address to the Dickens' Festival at Toronto on "Black House," noted that not only did the great English novelist display an extraordinary knowledge of the law—a fact which the speaker had publicly noted some years before—but that there were also sections of his work which were of peculiar interest to those interested in public health.

The contrast between disease conditions, as Dickens has recorded them, and the circumstances under which we live today, tends to be a startling one. Of particular interest is the outline in "Black House" of the medical procedure of the time, as far as smallpox was concerned.

"It may be as the President of the Social Hygiene Council rather than as the former Honorary President of the Dickens Fellowship that I speak when I say that no physician can read without interest, of a time when it was the natural thing, calling for no remark, that anyone could be allowed—or, indeed, compelled—to roam the streets with smallpox, with no attention but to bottles of coolie medicine and no cure against infection but 'sprinkling a little vinegar'."

"The thoughtful physician would remember," Judge Riddell continued, "that Queen Mary, of England, and Louis XV., of France, died of smallpox, and that George Washington died of the disease."

When President of the United States, in one and the same letter congratulated a friend on the birth of a son and the passage of his family through the smallpox. From the tenor of his message, it is evident that the one was just as normal an event in those days as was the other.

"Reading this, the physician of today might wonder what the world of that day was like. The world of England—or the present-day world of State in France should fall victims, or if President Coolidge were to write such a letter."

### Placing the Blame

"You say financial troubles brought you here?" asked the hostess.

"Yes, your honor, that's hardly possible!"

"It's a fact, though," retorted the patient. "I was crossing the other side of the street to avoid one of my creditors and saw another creditor on the other side. While I was trying to escape, a car hit me."

## Modern Mill Town Thrives On Trees

Pine Falls In Eastern Manitoba Rises Where Bush Held Sway Three Years Ago

Nothing speaks more abundantly of the rapid development of the natural resources of Canada than the growth of the town of Pine Falls, which stands 71 miles northeast of Winnipeg on the Canadian National Railways, in a country which three years ago was nothing but bush and water. Now it is pulpwood and water power. Since February, 1937, little more than a year ago, when the first car of pulpwood ever shipped from a Manitoba mill reached Winnipeg from Pine Falls, the Canadian National Railways have carried 85,000 tons of Manitoba-made paper. This represents about 1,700 cars and the Manitoba Paper Mills are still shipping an average of a dozen cars a day. Most of them go into the United States to Chicago, St. Louis, Mo., Denver, Colo., Des Moines, Ia., and many other distant points.

All the pulpwood used by the mill is shipped in by settlers in the district and an official of the company declared recently that it would be ten years before the timber concessions of the company were touched. Thus the homesteaders are able to earn money in the more or less idle winter to help them improve their farms in summer, and two or three problems are solved at once.

Pine Falls involves an expenditure of more than \$4,000,000 and all the machinery is on a huge scale. The population of 1,600 lives in stucco houses with electric wires and telephones, and is served by a modern school, a well equipped hospital and a church.

### A Land Of Flowers

Yukon Territory, Canada, is a land of flowers. Hundreds of types of flowers, plants, shrubs and trees grow on every hill and valley. Nature responds generously where flowers are cultivated and one of the lasting impressions left with the visitor is the variety and beauty of the flowers which decorate the houses and beauty the grounds of Dawson City.

Since the establishment of the third class tourist travel across the Atlantic a new era of travel has been inaugurated. You can go from the United States to Italy or Greece for but two or three miles, with meals and berth included.

## SHOULD BE ENCOURAGED

First Hand Knowledge Gained By Holiday Tours To Empire Dominions

According to arrangements now being completed in England a party of 25 school girls between the ages of 17 and 19 will make a tour of Canada this year, sailing on or about August 4—a memorable day in history—and returning in October.

This party of young people, whose tour of the Dominion will be made under the auspices of the Imperial Order of the Daughters of the Empire, will have opportunities of seeing phases of Canadian life not usual when by the ordinary visitor and on their return to England will be able to talk about Canada with first-hand knowledge and pass on accurate information to their friends.

The practices of holiday-making in other parts of the Empire is not to be encouraged and facilities for enabling people in different parts of the Dominion to see Britain must be a very valuable factor in the promotion of esprit de corps within the Empire. We hope this tour of English girls will be a forerunner of many such trips and that some of them will decide not to use their return ticket.

### A Goshawk Arrangement

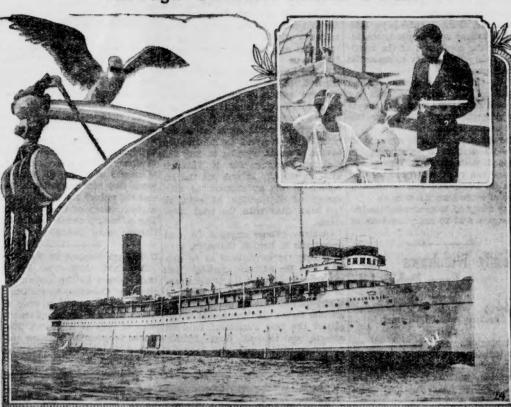

How Rancher and Hired Man Managed To Make Wages

In an arid country of Western Kansas lives a rancher seventy years of age whose hired man, sixty-five, has been with him for more than twenty years. The two at the barn manage to scratch out an existence. A visitor one day asked the old rancher, "How do you manage to pay that fellow his wages?" "It's his wages," replied the rancher, "I hired him for two years and gave him a mortgage on the ranch to guarantee his wages. At the end of two years he got the ranch and I went to work for him on the same terms. For forty years he has paid me back and forth every two years and neither of us has drawn a cent of wages."

### Russian Boy Succeeds

Only five years ago a thirteen-year-old Russian who didn't know a word of English arrived in the United States. He has now graduated from East Side High School, Newark, New Jersey, holder of the first prize for technical scholarship. He is a member of the Young Men's Christian Association of Northern New Jersey. He also has the reputation of being the most brilliant orator of his class.

## Through Canada's Inland Ocean

1. The Great Lakes-St. Lawrence S.S. Authority, of the U. P. Fleet which carries its passengers through the inland ocean. 2. Serving a little better than the trip. 3. The passengers compare and well-wishers of the trip.

The Great Lakes for a summer holiday have no equal. Contrary to the generally prevailing opinion, the automobile and touring and camping are a greater attraction, these large bodies of fresh water, really inland seas, are holding their own, indeed, by those who know it is said that they are doing more.

From Port McNicoll to the Head of the Lakes, is practically an ocean voyage. The great white steamers of the Canadian Pacific Railway are operated the same as the huge ocean liners. At Port McNicoll the visitor sees a man made harbor, surrounded by a village which has been developed from the original village of the late twenties. About an hour and a half after leaving port, a huge sound, the dining car, and going below the traveler finds the dining-room space and comfortable which greatly whets the already huge appetite.

After dinner a promenade of the broad white decks, as motionless as the city streets, but with what a difference! The fresh clean breezes, the sun strikes the horizon and sinks in blinding splendour leaving behind a sense of peace and well-being. A float upon seas of graceful white spread wings appear over the stern, crying the poignant call of the hungry gull. So still they are as to appear motionless, a floating bit of white feather, but a chance opening reveals the cool blue wings, and the wings swooping down, screaming with the wildness of the blizzard, with a strength and speed that is amazing.

Land slowly disappears, and the islands are lost in the soft enfolding darkness. Stars come out, and a white moon floods the lake with an ethereal beauty. All is quiet—a friendly intimate quiet—broken here and there by a merry laugh, a

passing footstep, the throbb of the great engine and the spark on the water, but with what a difference! We pass the protruding Beria peninsula, then the Manitoulin Island, the home of the Great Spirit. In the distance we can see the twinkling light of the mariners' guide, the light-houses at Cabot's Head, Lonely Bay, the Flower, Pora and in the further distance ahead, Goshawk, the marking point of the entrance to Lake Huron.

These steamships, the "Kewatin," "Manitoulin," and "Assiniboia," of the Canadian Pacific service are first-class in every way, and ply these inland waters from May 1st to September 28th. The journey occupies the better part of three days, with every wave bringing forth charm and amusement at the unfolding beauty of the trip.

## The World's Dairy Congress

Will Be Held In Britain During the Coming Summer

The world's dairy congress will be held in Great Britain during the coming summer for the first time in the history of the organization. On the three days the programme will be carried through in Scotland. The congress is being held under the patronage of His Majesty King George VI.

For England, the honorary presidents are Mr. Guinness, M.P., minister of agriculture, and Mr. N. Chamberlain, M.P., minister of health. The honorary president for the Scottish section is Sir John Gilmour, Bart., M.P., of Montrose, Vice, secretary of state for Scotland, while the chairman of the Scottish sub-committee is Colonel W. T. R. Houldsworth, of Kirkbride, Maybole, a famous breeder of milk-reed and tuberculin-tested Ayrshire cattle. The congress will be a great support for local authorities and medical officers of health.

The congress will open on Tuesday, June 26, in London, and a galaxy of authorities will contribute to the discussions, including Mr. Otto F. Hunziker, Chicago, Professor E. V. McCollum, Baltimore; and Dr. R. S. Breed, New York. The London section will be later followed by visits to farms, the latter including Thos. E. Buxton's place at Waltham Abbey, where certified milk is being supplied to the London market.

Ayrshire cattle. The King's farm and dairy at Windsor will also be visited. The members of the congress will travel from London to Edinburgh on Wednesday, July 4, for the visit to Scotland. The conference opens on the following day with an address by the secretary of state for Scotland. A number of papers will be read, and visits to creameries in Edinburgh and various dairies in the vicinity of the city have been arranged.

Dr. Orr, D.S.O., of the Rowett Institute, Aberdeen, is to submit a report upon the results of the varied milk nations fed to school children in Scotland. This will no doubt result to the experiments conducted by means of the government of Scotland. A number of papers will be read, and visits to creameries in Edinburgh and various dairies in the vicinity of the city have been arranged.

Dr. Orr, D.S.O., of the Rowett Institute, Aberdeen, is to submit a report upon the results of the varied milk nations fed to school children in Scotland. This will no doubt result to the experiments conducted by means of the government of Scotland. A number of papers will be read, and visits to creameries in Edinburgh and various dairies in the vicinity of the city have been arranged.

The congress is being looked forward to with great interest by all who are associated with the dairy trade.

### Not a Favorite Dish

The applicant for cook was untidy and insolent in appearance. "Don't hire her," whispered Jones to his wife; "I don't like her looks."

"But," remonstrated his wife, "just consider the reputation for cooking she bears."

"That doesn't matter," said Jones, testily, "we don't want any she-bears cooked—we want a nice woman."

They laughed at me when I spoke to the waiter in Italian—but I came right back with some Scotch.

### FAMOUS LONDON TOWER

The Tower of London was the scene of a fire recently which broke out in one of the towers of the historic structure. The flames were quickly extinguished, and damage was confined to the top floor, used for offices.

# Electrification Of Rural Areas In Canada Is Being Carried Out On Increasing Scale

That electrification of rural areas in Canada will be carried out on a broad and increasing scale in the next few years is pretty well indicated by progress to date and plans being laid for the future. The province of Ontario has been leading through the activities of the Hydro-Electric Power Commission which was supplying 10,000 rural customers with electric service from nearly 2,500 miles of rural electric lines at the date of its last annual report. Since then more than 800 miles of lines have been built and plans for this year contemplate the construction of an additional thousand miles, bringing the total to 4,000 miles of line especially built to supply farmers and others in rural areas with electric light and power.

Indications are that progress in rural electrification will be rapid in Western Canada. Electric power lines are spreading out from Winnipeg, Regina, and Calgary particularly. These will not only supply the smaller towns with electric light and power but will bring the boon of electricity to many farms along the way. Manitoba is taking the lead up at a conference in Winnipeg recently held on power, agricultural and manufacturing interests, plans were formulated for establishing electric service in Canada as a step toward promoting the electrification of rural areas. This plan has been followed by the National Electric Light Association in the United States and it is interesting to note the number of uses to which electricity is being put in domestic and industrial areas. The installations include such things as refrigeration, lighting, pumping water, milking, cooking, heating, drying, washing, cleaning, sewing, ventilation, power for hoisting and cutting and for grinding and mixing feed, and for many other uses. The list embraces all the uses of electricity in city homes and many special uses adapted to the farms.

It is predicted that the number of "electrified" farms in the United States will be using electricity inside of five years, a percentage supported by the fact that the number of "electrified" farms in 27 states doubled in three years, from 20,000 in 1923, to 40,000 in 1926. It is also interesting to note the progress being made in electrification in New Zealand. Five years ago internal combustion engines made up 90 per cent. of the farm power plants. Recently, of 26,540 power plants, 8,436 or 30 per cent. were electric motors. The most widespread use of farm power in New Zealand is for milking equipment, of which there were over 17,000 units in use last year. The electric motor supplies an ideal drive and can be moved around for other purposes.

Electrification of rural areas will certainly proceed rapidly in Canada and with abundance of fuel, water power and rates generally very much lower than in the United States, it will be surprising indeed, if, at the end of five years, there are not in Canada as many or more electrical farms as population to population as there are in the neighboring republic.

**Mining Canadian Asbestos**  
The productive deposits of asbestos in the Eastern Townships of Quebec are worked in open pits, and the best grades of long fibre material, known as "crude" are hand-mined and separate them from the rock; but to recover the crude short-fibre asbestos from the smaller veins the rock is crushed and the fibre removed mechanically by elaborate processes in large mills.

**Novel Letter Box**  
A novel letter box has been constructed at Leipzig, and then placed in an open place and then comes of the value of the stamps required are placed in slots provided for them. Through the entrance the stamps are easily stamped and the letter falls into the box.

**Our Fashion Book**, illustrating the newest and most practical styles, will point the way to every fashion maker. Price of the book 10 cents the copy.

## Through Milking

**Milking the Cow To The Last Drop**  
Good Dairy Practice

In an experiment performed at the O.A.C. Guelph, to determine the value of milk, taken at different periods during the ten minutes that a cow was being relieved of her half-day production the following interesting figures were obtained:  
The first three pounds milked out tested less than one per cent. of butter fat; the next four pounds tested above 2.2 per cent.; the third portion, weighing over four pounds, tested better than 0.5 per cent.; while the last portion milked, weighing nearly six pounds, tested over 0.9 per cent. butter fat. A half test cup of milk left in the udder each time of milking would mean a loss of nearly a dollar a month per cow less in butter fat. Furthermore, milk left in the udder will soon bring about the condition of dryness. Thorough milking out is essential to success in dairying. Get the last drop.

## Coming To Canada

**Former Royal Navy Men Being Brought Out Through Navy League**

Former Royal Navy men with their families will be brought to Canada through the Navy League of Canada, according to the head of the delegation from Canada which recently conferred with the British body. The general scheme is to find jobs for discharged naval men and their families, the Navy League taking care of them from the point of their departure until they reach their destination and supervising them after being placed in employment.

## Winnipeg Newspaper Union

**Seal Growers' Association**  
Saskatchewan Registered Seal Growers Report Sales

Highly favorable reports of the workings of the Saskatchewan Registered Seal Growers' Association were heard at the recent meeting of the Association held in Moose Jaw. The officials met to discuss the operations of the organization. The business was reported, is now at its height of shipping. Sales are far in excess of the corresponding period last year, with both internal and export registered seal traffic increasing.

## DEVELOPMENT OF THE WEST

**Such a Lot Has Been Accomplished In A Short Space Of Time**

At Saturday night's banquet in celebration of the opening of the new C.N.R. station, vivid reminders were given of how short a time it is since railway transportation began in the west and how great has been its development. General Superintendent Brown, who still brings the greatest vigor to the discharge of his duties, recalled how, when he commenced railroading out of Winnipeg, the trains had to stop to let the herds of buffalo go by. Mr. John A. McLaughlin, who came to Edmonton by coach and has ever since been an active figure in this community, pointed out at that time the village people in all the country between Portage la Prairie and the Rockies were no more numerous than those assembled in one room as the C.N.R.'s guests.

These and other reminiscences brought home as nothing else could to how rapid has been western progress. On such an occasion it is always well to look back over the way by which we have come. In doing so we are able to appreciate much better what the future must hold for this country. The optimism with regard to it that was expressed was not simply the product of the festive gathering. It is supported by facts and figures, the significance of which cannot be disputed. Those cited by Vice-President Hangerford were especially convincing. Last year he informed his guests, Alberta produced more wool tonnage per head of population than any other province. For each person within our borders were produced 13.7 tons, by which traffic is measured, as against 10.2 in Ontario, which ranks second, and an average of 11.3 for the Dominion.

The growth in the traffic entering in Edmonton since the C.N.R. steel entered was of such a nature that last November has been of astonishing proportions. Anyone who had then ventured to predict such development in that space of time would probably have met with a rejoinder similar to that which a Liverpool merchant once to George Stogimann in 1828, when he told what his first locomotive was capable of doing. The merchant offered to set stevedores to work in that space of time would probably have met with a rejoinder similar to that which a Liverpool merchant once to George Stogimann in 1828, when he told what his first locomotive was capable of doing. The merchant offered to set stevedores to work in that space of time would probably have met with a rejoinder similar to that which a Liverpool merchant once to George Stogimann in 1828, when he told what his first locomotive was capable of doing.

## Seed Growers' Association

**Saskatchewan Registered Seal Growers Report Sales**

Highly favorable reports of the workings of the Saskatchewan Registered Seal Growers' Association were heard at the recent meeting of the Association held in Moose Jaw. The officials met to discuss the operations of the organization. The business was reported, is now at its height of shipping. Sales are far in excess of the corresponding period last year, with both internal and export registered seal traffic increasing.

## Where Canada Spends Most

**U.S. Holds Leading Place In Canadian Trade**

An indication of the prevailing encouraging condition of business in Canada is given in the Canadian trade report for the 12 months ended January 31, 1928. The total trade of the Dominion for this period was \$2,225,762,281, an increase of \$24,861,262 over the 12 months ended January 31, 1927. Of this total, exports amounted to \$1,257,943,566, and imports, \$1,067,818,715, a balance in favor of exports of \$190,134,851.

The United States, as for a long time past, again holds the leading place in Canadian Trade. In the 12 months under review, Canada bought from the United States goods to the value of \$769,238,720, or about 37 per cent. of the total value of the Dominion. The United States was Canada's best customer as an individual country, with total purchases at \$471,033,509; Great Britain, in second place with \$467,286,546. Canadian imports from the United States were valued at \$463,876,000, which is more than the total value of imports from the whole of the British Empire.

Canada's principal foreign trade is done with 29 countries.

## Says Photographing

**Royalty Easy Task**

**Are Patient and Most Courteous Says London Expert**

"Photographing royalty is the easiest thing in the world. They display the most patience and are the most courteous of all people."

Formerly took his idea abroad and it was met with universal success although of course greatly elaborated and exploited. At one it fell into the hands of the king and the queen of the Belgians, who arrived at Halifax on board the Comair, April 10.

Mr. Speight referred to the photograph of the Prince of Wales, taken at Halifax on his visit here in 1919. It is now universally known as the "smiling Prince," as a really fine picture. On account of the story connected with it, which is that the Prince was signing a visitor's book to find that he was signing the pledge, causing him to look up and smile, this photograph has created a joke wherever it has gone. Mr. Speight added.

## Settling For Alberta

**Effort To Bring Out Its Hundred New Families This Year**

Over 600 new families arriving in Canada this year with limited funds can be looked after and settled advantageously in Alberta by the various provincial agencies of the Canadian Colonization Association, according to reports submitted by various representatives at the annual Alberta convention just concluded. The selective first set was 400 families, but a survey showed that at least 200 more settlements could be made. T. G. Herzer, manager of the association, reported that during the past three years 48 families had been settled in Alberta on 122,000 acres of land, of which 183 were settled last year.

Customer—"Have you a book on salesmanship?"  
Book Clerk—"Yeah—(yawn)—we've got one. Look around here, you'll see it. I haven't read it myself."

Customer—"I should say you have!"

# Canada Now Leads The World As An Exporter Of Wheat And Of Wheat Products

## Made First Pulp Wood Paper

**Nova Scotia Man Discovered Process For Making Paper From Young Trees**

Recent announcement of the plans to establish a \$12,000,000 paper mill in Nova Scotia has recalled the fact that it was in Nova Scotia that the manufacture of paper from wood pulp was first invented, 90 years ago. The first paper mill in the Dominion was established in 1838 by a Nova Scotian settler, who was the man who saw the possibilities of utilizing the wood pulp in 1838 he presented samples of the white paper at the office of the Acadia Recorder, Halifax. The idea was quickly caught up and perfected elsewhere and while the Nova Scotian genius received little compensation in his life, his native province now stands a chance of reaping some benefit from his invention.

Near Ferryville's home on the old Bedford road near Halifax, there was a paper mill in which the product was manufactured for years. Also, near by, there were three lumber mills. The idea came to young Ferryville that the waste in the lumber mills, might be utilized in paper making in place of logs. For years he worked on the idea, making the lumber mills, might be utilized in paper making in place of logs. For years he worked on the idea, making the lumber mills, might be utilized in paper making in place of logs. For years he worked on the idea, making the lumber mills, might be utilized in paper making in place of logs.

## Asks For Restricted

**Use Of Firearms**

**Ottawa Journal Suggests Way To Prevent Many Serious Accidents**

Under the head "The Deadly Gun," the Ottawa Journal in an editorial urges the prohibition of the industrial use of firearms. The industrial use of firearms is a serious problem, and the Ottawa Journal is a leading voice in the matter.

## Will Use Photography

**Pictures Will Aid In Locating South Pole Says Byrd**

Photography will be relied upon to a large extent to help him find the South Pole, objective of his Antarctic expedition, by aeroplane, says Commander Hubert H. Byrd. The explorer and his laboratory of two large cameras are at work on the photographic problem of the expedition. In addition to making a camera record of every mile of the flight by means of an automatic camera, it is expected that Byrd will use the plane's Commander Byrd said he was also expected to use photography to help him locate the pole.

## Don't Be a "Pickdaw"

**People Who Point Out Unimportant Mistakes Are A Nuisance**

A sagacious writer has coined the word "pickdaw." Everybody knows what he means without any explanation. It is the work of the "pickdaw" to point out the mistakes of others. It is the work of the "pickdaw" to point out the mistakes of others. It is the work of the "pickdaw" to point out the mistakes of others. It is the work of the "pickdaw" to point out the mistakes of others.

## Destroyer Ready For Work

**The two destroyers, the Vancouver and the Champlain, which the Dominion is receiving on loan from the British navy, have sailed for Canada.**

The two destroyers, the Vancouver and the Champlain, which the Dominion is receiving on loan from the British navy, have sailed for Canada. They will call at the Cape Verde Islands to Trinidad, then they will go to Jamaica, where they will put company, the Vancouver proceeds to St. John's, and the Champlain will come North to Halifax.

**Teacher: "What is the interest on \$500 for one year at two per cent.?"**

**Answer: "Two per cent. I'm not interested—Answer."**

**Traveller: "Here is a ten-shilling note. I am sorry I haven't a penny!"**

**Conductor: "Cheer up, you are a penny in the power available in the whole Dominion."**

Among the field crops of Canada wheat stands supreme. No other natural product has been so important to the Dominion as wheat. It is a vital industry upon the economic life of the Dominion as a whole and nothing has attracted so much attention from the outside world.

The first real impulse to wheat growing in Western Canada was received about 1840 when the first "purifier" for separating bran and middlings from flour was introduced from the United States.

About 1870 "wheat trading" as a definite business enterprise became firmly established. In that year the crop report issued by the Canadian Government, and which incidentally was the first Government report to be prepared up to that time, showed the wheat acreage at 450,000 acres. In 1927 the acreage shown to wheat was 22,460,154 acres, with a yield of 5,024 bushels per acre.

As an exporter of wheat and wheat products Canada now leads the world, with a growing export for export than any other country. It is interesting to note in this connection that Canada actually exports as much as 924 bushels to Australia and Argentina combined.

The rise to prominence of Canada, as a wheat exporting power, has been made possible by the small degree by the work of the plant-breeder. It is probably safe to say that in few countries, if any, has the work of the scientific breeder of plants contributed more directly and substantially to the economic prosperity of a country than in Canada. He has given to Canada varieties of wheat which have added millions of dollars annually to the value of Canadian production and has turned what was once a distinctly hazardous occupation throughout vast areas of Western Canada into a very safe and profitable enterprise.

## Will Use Photography

**Pictures Will Aid In Locating South Pole Says Byrd**

Photography will be relied upon to a large extent to help him find the South Pole, objective of his Antarctic expedition, by aeroplane, says Commander Hubert H. Byrd. The explorer and his laboratory of two large cameras are at work on the photographic problem of the expedition. In addition to making a camera record of every mile of the flight by means of an automatic camera, it is expected that Byrd will use the plane's Commander Byrd said he was also expected to use photography to help him locate the pole.

A special automatic camera with which he will take shots as soon as he flies toward the pole is now being constructed. This picture-taking device will be developed while the flight is under way.

Films on which pictures of the sun will be taken are also being prepared. What has been termed "position films," Commander Byrd said, and by predicting the position in different sectors in which different spots appear he will have six sun shots by which he can determine his own position on or off his plotted course.

## Destructor Ready For Work

The two destroyers, the Vancouver and the Champlain, which the Dominion is receiving on loan from the British navy, have sailed for Canada. They will call at the Cape Verde Islands to Trinidad, then they will go to Jamaica, where they will put company, the Vancouver proceeds to St. John's, and the Champlain will come North to Halifax.

## ina Low Priced Car

THE most recent trend of automobile design is strikingly exemplified in the "Bigger and Better" Chevrolet. The high, narrow radiator . . . the long, low bodies . . . the unbroken sweep of the lines from front to rear . . . the stylish blending of colors in finish and upholstery . . . these distinguish Chevrolet as unmistakably new and fashionable. In power, in speed and snap, the "Bigger and Better" Chevrolet is no less modern and vigorous. Countless refinements in engine and chassis give Chevrolet a performance as dependable as it is brilliant.

The "Bigger and Better" Chevrolet, alone among low-priced cars, has truly caught the modern spirit.

The G.M.A.C. . . General Motors' own deferred payment plan affords the most convenient and economical way of buying your Chevrolet on time.
